NO-TEAR ™

NO-TEAR™ THE SYSTEM

DSI's No-Tear™ storage system is designed for storing and handling sterile instrument sets in blue wrap trays and rigid containers. The system is designed with patient care and employee safety in mind with a collection of highly efficient storage equipment combined with a leaned out process within the CS/SPD processing cycle.

Once the instrument tray is prepped, packed in a blue wrap, and placed into our stainless steel wire mesh basket, the blue wrap is never touched again until the Operating Room. The primary cause of punctured blue wraps is by stacking and mishandling the individual trays throughout the processing cycle and transportation.

DSI's family of No-Tear™ storage equipment such as our Triton Case Carts™, Triton Transport Carts, and our high density MODU-MAX CTS™ storage systems all include a specialized shelf location designed to fit each tray on its own to eliminate stacking and other handling risks. The need to reprocess sets and reschedule procedures are a thing of the past with this new approach of handling, transporting, and organizing your sterile instrument sets.

The DSI No-Tear™ storage system has a long list of important benefits that will help provide a positive Return On your Investment such as;

- Seamless work flow
- Valuable space savings
- Quicker retrieval
- Eliminate the need for reprocessed instrument sets
- Adjustable storage heights every 1" for maximizing cubic space
- Reduction of handling trays, increasing employee productivity
- Ergonomically designed for safe retrieval and put away
- Enhanced visual indicators for labeling contents
- Clear visibility of inventory
- Categorized inventory by discipline
- Modular design for scalability and future expansion
- Compliance
- Interchangeable components between all three DSI No-Tear™ storage systems

MODU-CASE™

NO-TEAR™ TRITON CASE CARTS™

DSI's line of TRITON CASE CARTS™ are built for transformation. Our modular storage system within the cart interior helps you custom configure the shelves based on the width and height of the surgical instruments stored in both blue wraps and rigid containers. Our carts are a perfect fit for the NO-TEAR™ storage system within your CS/SPD.

Product Specifications

Clean/Dirty Stoplight Indicator Wheel

Double Pane Doors, Reinforced Hinges

Clam Shell Lock Assembly

Pullout Shelf, 400lbs. Load Capacity

Adjustable Shelf, 600lbs. Load Capacity

1% Sloped Bottom Shelf, 6 Drain Holes

Polypropylene HDM Non-Marking Corner Bumpers

MODU-MAX CTS

BENEFITS OF THE CTS

HIGH DENSITY CONTAINER TRAY STORAGE VS. TRADITIONAL OPEN WIRE SHELVING

- Designed Specifically for Instrument Sets (Rigid Containers & Blue Wraps)
- Dedicated Location for Every Container or Blue Wrap
- Adjustable in 1"H Increments to Optimize Space Between Sets
- Eliminates Stacking of Blue Wraps
- Designed for Better Ergonomics for Employee Safety
- Reduce and/or Eliminate Tears in Blue Wraps (No Touch System)
- Promotes an Open Workflow Within the Department
- Helps Achieve Compliance and Meet National Healthcare Standards
- Broad Range of Visual Indicators/ Labeling Available
- Promotes Picking Accuracy and Time Efficiency

- Designed for Bulk Supply Storage
- Does Not Provide Ability to Have Designated Locations Per Set
- Open Wire Shelves Are Set in One Fixed Position Once Assembled
- Promotes Stacking of Instrument Sets
- Rigid Design With Fixed Shelves
- One Size Fits All Methodology (Promotes Stacking)
- Create Bottle Necks in Aisles and Case Cart Staging Area
- Limited Options of Visual Indicators Available
- Does Not Enable Staff to Pick Accurately and Efficiently
- Not Designed for Maximum Space and Time Efficiency
